Quality Policy

As we use the best raw material including high quality yarn, we can be confident that we will produce the best product. Our customer oriented strategy combines with our experienced staff to ensure that each of our product fulfills the requirements of our clientage.

In 2010 We have updated our quality Control laboratory with the state of the art equipment from SDL ATLAS UK. Every batch produced by our factory is independently tested in our lab before the quality control staff allows shipment. Record for every batch is kept for reference. We are proud of the fact that our lab results are extremely accurate and have been verified several times by the third party testing in labs all over the world.

HTM

Stitching Unit

We have a long forecasted the shift of business towards finished products and have tailored our production capacity accordingly. Over the last decade the proportion of our sales in finished Products has steadily risen to 74%. Considering this shift in business we have built a large centralized sewing unit spread over 40000 sq meters.

To ensure high quality, our stitching facilities are fitted with high-tech machinery add value to our product while also bringing us closer to a more environmentally sustainable production process. We are specialist of Intuitional Items for Hospital, Hostel and Hotels, Security and Workwear.

Over 1000 stitching machines are managed with the most skilled and expert operators. Our sewing production capacity is 1 million garments and 250,000 Made-Ups Bed Sets / Sheet Sets.

ALTERNATIVE ENERGY

Keeping in view of the prevalent energy shortage in Pakistan. We decided to make a major investment of US\$ 1 million to upgrade our equipment to run on alternative fuels other than natural gas.

This will ensure that we are able to plan our production without depending on the grid. This is major measure to improve out on time delivery performance and quality of our products as consistent working temperatures can easily be maintained. In addition of hugely improving our on time shipment performance, we will also be in a position to reduce the lead times especially in winter periods.

Our valued clients can now count on shorter lead time as all year round and can benefit from reduction in contingency stock holdings. We took this opportunity to order equipment capable of running on bio fuels, which will go a long way towards fulfilling our contribution towards reducing CO2 emissions. We believe it to be a step in the right direction and we will keep striving to contribute our share towards sustainable future for generations to come.
