

WESTMARK
DO IT SIMPLY!

We take responsibility

*At home in this area of Germany.
Reliable kitchen gadgets and
household goods since **1956**.*

PRODUCTION IN GERMANY

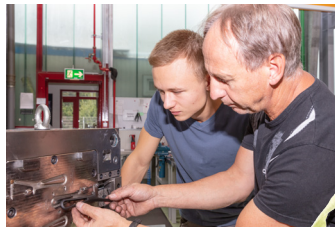

- social consciousness
- continuous education
- secure income
- safety standards
- health measures
- short distances
- highest quality standards
- modern technology
- controlled production conditions
- high availability
- heat recovery
- green electricity through photovoltaic system
- recycling of raw materials
- sustainable packaging material
- climate-friendly

We take responsibility

At our locations in Lennestadt and Wittelsberg we work as a matter of course according to the strict German safety standards and in accordance with labour and social laws.

We offer well-equipped, modern workplaces, promote health measures, guarantee a secure income, provide regular professional training and, as a family-run company, we feel responsible.

A good mix of young, innovative and experienced employees create both professionally and socially enriching cooperations and are a good basis for the future.

GOAL: SECURE JOBS IN GERMANY AND CREATE NEW ONES

Production: Made in Germany

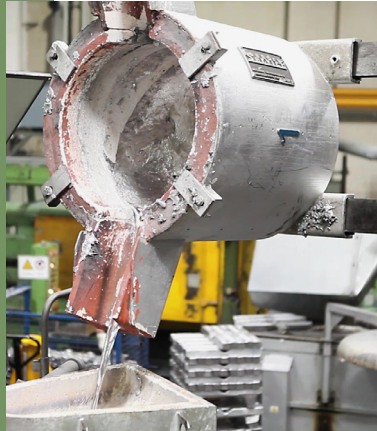

Production in Germany is a key success factor and the core of our identity. We have been manufacturing kitchen gadgets since 1956.

Regular investments in our production facilities and machinery keep us up to date with modern technology. This enables us to produce in an energy- and performance-efficient way.

As a certified company, we regularly put all our processes to the test and optimise them.

Short distances, the highest quality standards and high availability for our customers are important to us.

MADE IN GERMANY

GOAL: EXPANSION OF SUSTAINABLE PRODUCTION IN GERMANY

PRODUCTION IN GERMANY

Energy and material: closed heating and recyclable material cycles

With our large photovoltaic system we produce our own climate-friendly green electricity. Waste heat from production is recovered and fed into the heating circuit.

Our plastic kitchen gadgets are food-safe, BPA-free and 100% recyclable. Sprues in production, just like our metal waste, are returned to the material cycle.

The cardboard material used for our packaging consists of 90 to 100 % recycled material. Polybags are gradually being replaced by paper sleeves, and blister packs are giving way to plastic-free packaging solutions.

GOAL: FURTHER ENERGY OPTIMISATION

Sustainable alternatives wanted!

Is plastic generally evil?

No!

Our products are designed for many years of use. The thermoplastics we use (PE, PS, PA, PP, ABS...) are 100% recyclable and can therefore be cleanly fed into the material cycle.

Which current alternatives are good solutions?

We reject solutions whose ecological statement competes with food production.

We also reject bogus solutions based on mixing crude oil-based plastics with ecological raw materials.

As a rule, these cannot be recycled. They can only be burnt and are thus a wrong way to go for a sustainable material management.

»The future depends on what you do today.« (Mahatma Gandhi)

**We are
on the way!**

A specially formed Westmark sustainability team is permanently engaged in researching ecologically optimised alternatives for plastics and testing them.

GOAL: SWITCHING TO ECOLOGICALLY SOUND MATERIALS
