

UPDATE

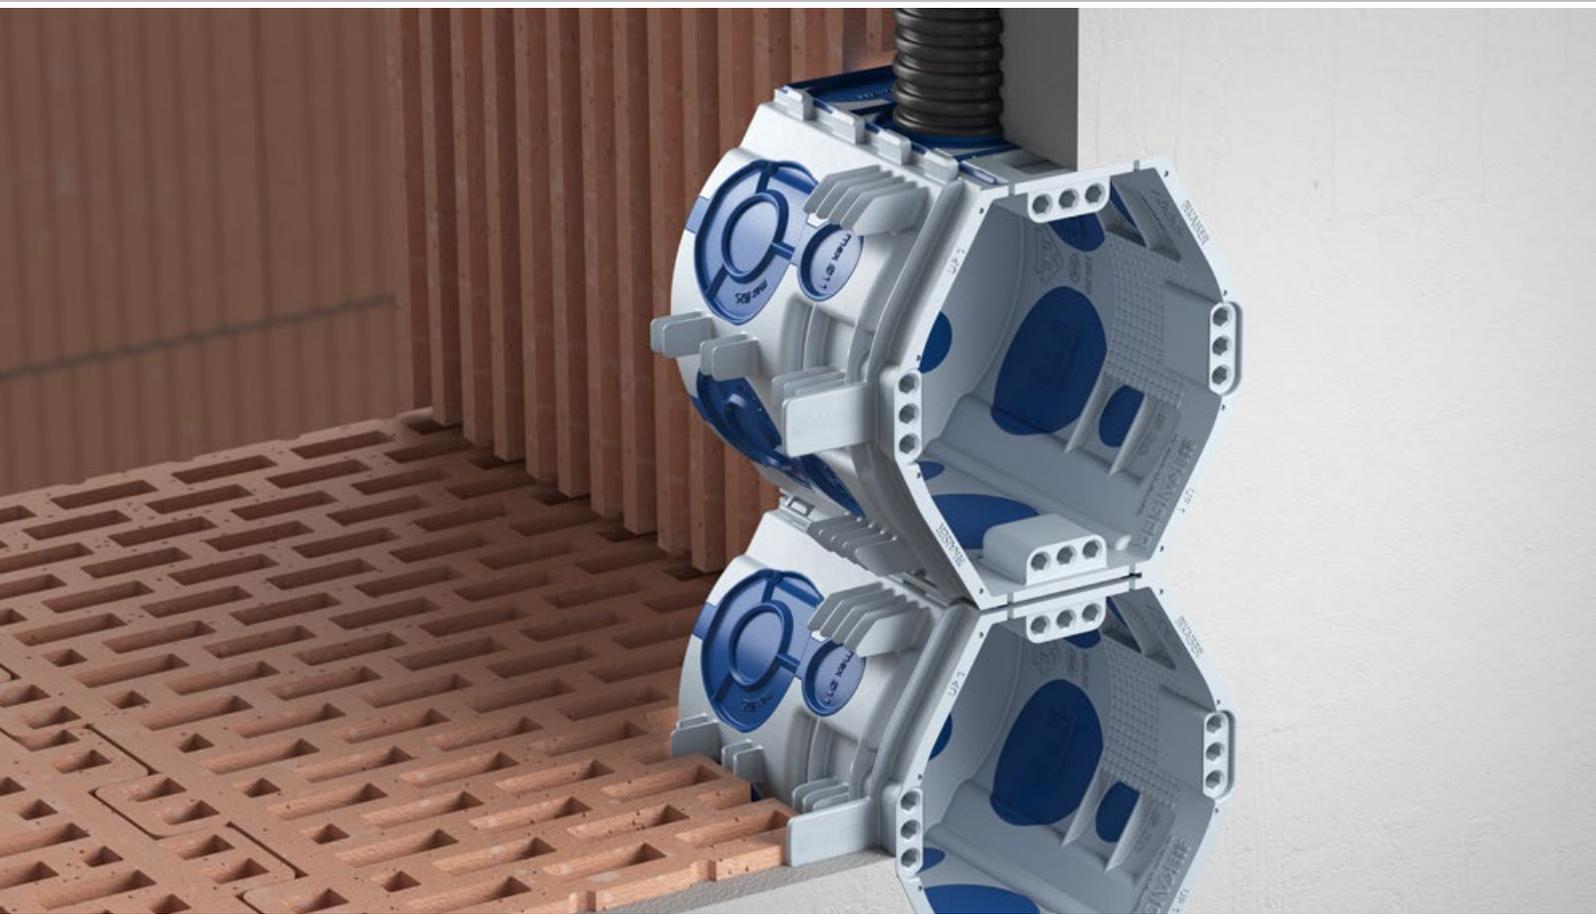

UP1

101%  KAISER

Our best **UP** flush-mounting box.

The system **UP**date for your optimal installation.

**Open through-wiring,
breakaway bridge and conduit entry**
Device connection without spatial separation

50 % time-saving
Secure fixation in all stones
without plaster or similar
additional fixing with PU foam
possible

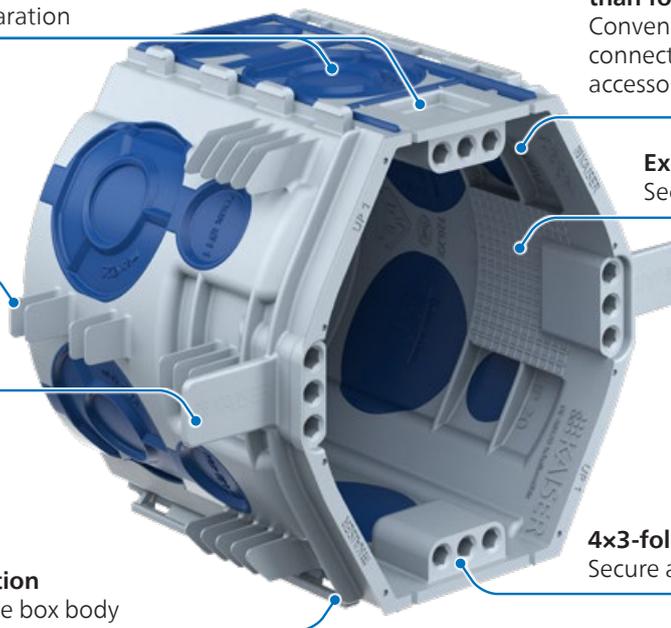

Depth stop
To ensure minimum plaster thickness

Stable and side-neutral combination
Safe combination over the complete box body

**25 % more installation volume
than for Art. No. 1555-21**
Convenient accommodation of leads
connecting terminals and installation
accessories

Expanding claw fields
Secure and flexible accessory fitting

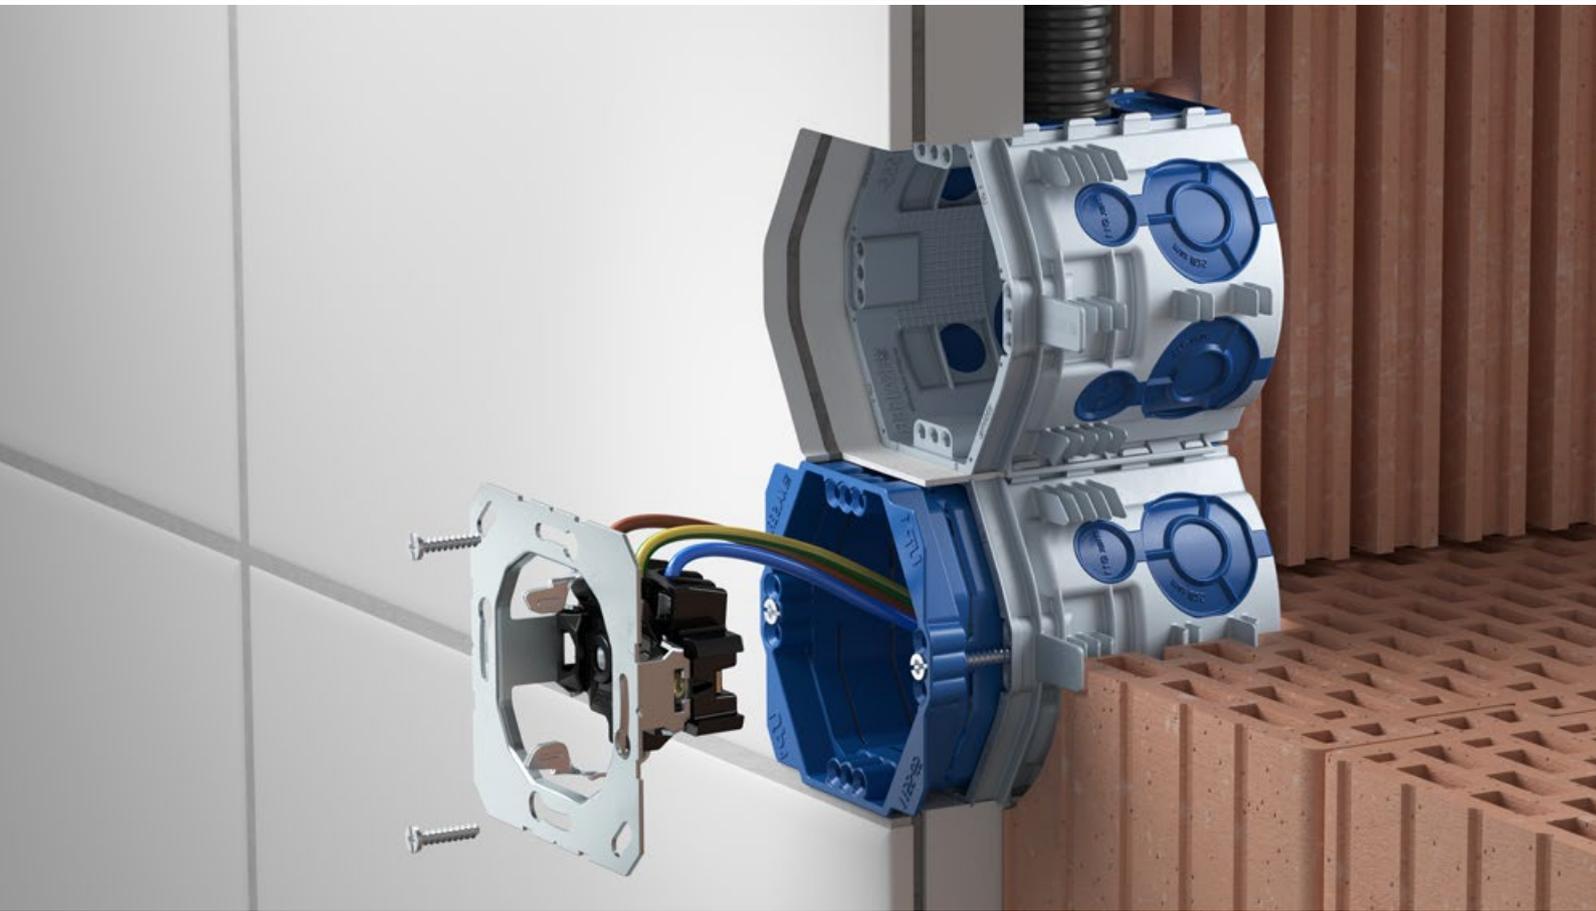

4x3-fold screw domes
Secure and flexible accessory fitting

One-gang box UP¹ ECON[®] Fix
Art. No. 1055-26

One-gang junction box UP¹ ECON[®] Fix
Art. No. 1555-26

UP¹. The new standard for UP flush-mounting boxes.

To the trailer

Triple conduit feed M25 from one direction
No restriction of conduit feed, e.g. next to doors

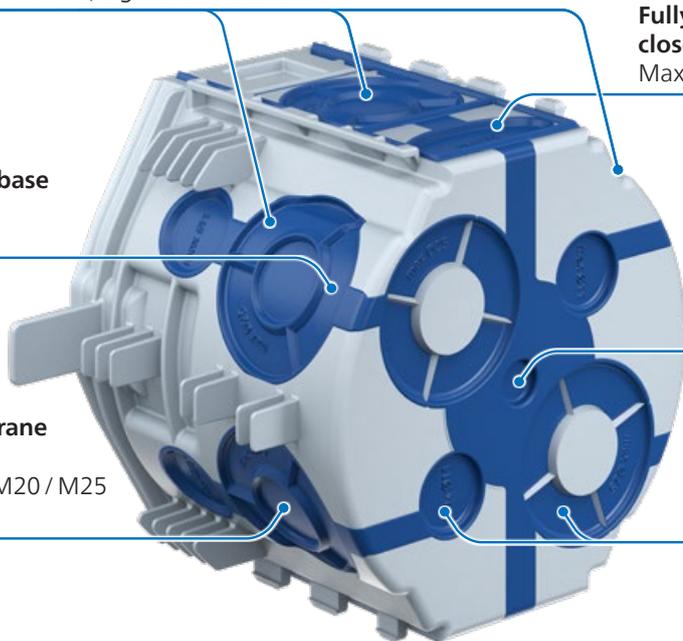

Fully insulated through-wiring close to the floor
Maximum usable wiring space

Entries close to the base
Maximum usable wiring space

Central TPE membrane in the bottom of the box
Box fixation possible by means of PU foam

ECON[®] Multi-Membrane
Airtight and toolless insertion of conduit M20 / M25 or several cables

2 line and 2 conduit entries in the bottom of the box
Hard component in the conduit entries secures the inner volume against pressure from plaster or expanding PU foam

UP¹ signal cover
Art. No. 1181-65

UP¹ plaster compensation frame - Stepless plaster compensation from 10 - 35 mm
Art. No. 1155-65

UP¹ - the advantages at a glance

All UP¹ one-gang boxes offer generous installation space for the convenient accommodation of leads, connection terminals and installation accessories.

Fixing with ribs on several levels for secure fixing in all stones.

The safe KAISER combination - Place the boxes next to each other, no matter which way round, and press them together with a "click". Now you have a stable combination with a standardised combination distance of 71 mm.

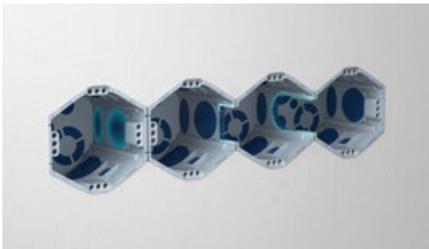

Through-wiring and entries close to the base. The leads can be stowed directly on the base and take up little space.

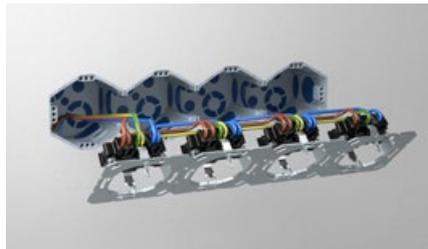

Cable / conduit diameters up to Ø 25 mm can be installed quickly and airtight through the elastic ECON[®] Multi Membrane.

The signal cover (Art. No. 1181-65) for the new UP¹ flush-mounting boxes protects the inside of the box and the screw domes during plastering.

Overlapping box diameters allow for a stable combination. Connecting accessories can be implemented in many different ways.

Among other things, this makes it possible to insert the connecting cables of pre-wired accessories such as sockets quickly and easily without having to connect them in the boxes first.

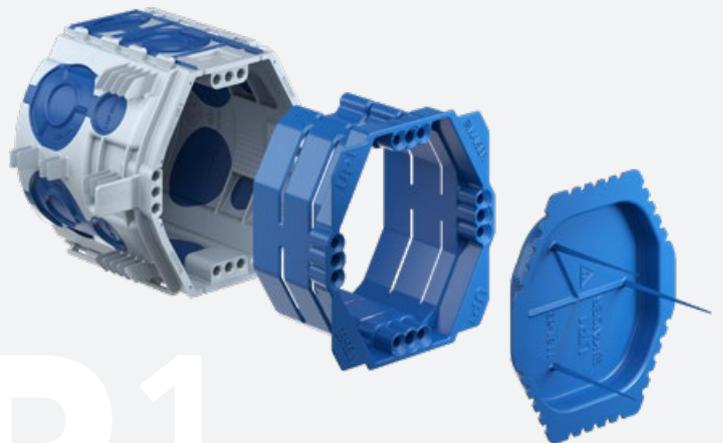

The stepless plaster compensation frame (Art. No. 1155-65) is used to compensate for deep-seated boxes.

KAISER, partner of the trade.

UP¹, the new flush-mounting programme from KAISER for the electrical trade, lifts flush-mounting installation to a new level and facilitates it in an unprecedented way.

- 25 % more installation volume
- Quick fixing by means of ribs
- Stable and side-neutral combination
- For all common stones
