Electrical functional integrity
Connecting | Junction | Distributing

In future, Spelsberg will unite its first-class solutions for electrical functional integrity under a new brand: LIFELINE stands for the intelligent integration of innovative product designs with high quality heat and fire resistant materials and components. Consequently, it is ensured that in case of fire all the relevant safety systems continue to work without interruption even under the toughest conditions.

**More fire protection.****More safety. More trust.****High technical performance.****Electrical function integrity****E30 to E90**

LIFELINE is the technology for life. With the knowledge and experience of our competent staff, we take responsibility every day to make the world a little safer. The smart fire safety solutions of LIFELINE offer first-class quality, which can be relied upon in emergencies. LIFELINE protects all life and assets without compromises and guarantees the best form of sustained fire safety.

Only reliable products can ensure the electrical functional integrity and protect life in case of a fire. LIFELINE guarantees the function of life-saving electrical systems in buildings and tunnels, such as emergency lighting and smoke extraction systems in escape and rescue routes. As a leading manufacturer of high quality junction and connection boxes, Spelsberg has always been strongly positioned with the LIFELINE brand for the development of fire protection solutions, particularly in these product segments.

The junction boxes of LIFELINE provide electrical functional integrity between 30 and 90 minutes in the event of a fire. In doing so, the classes E30 to E90 identify the minimum duration for the functional integrity of the electrical systems.

LIFELINE ensures that the function of fire alarm systems, acoustic systems, emergency lighting or elevators with evacuation function is maintained for at least 30 minutes during an emergency. And in the case of pressure boosting systems for the extinguishing water supply, smoke and heat exhaust ventilation systems or for fire brigade lifts for at least 90 minutes. Guaranteed.

E30

Ensuring the functional integrity for at least **30 minutes**, e.g., for:

- Fire alarm systems
- Acoustic systems
- Emergency lighting
- Elevators with evacuation function for warning, escape and/or rescue

E90

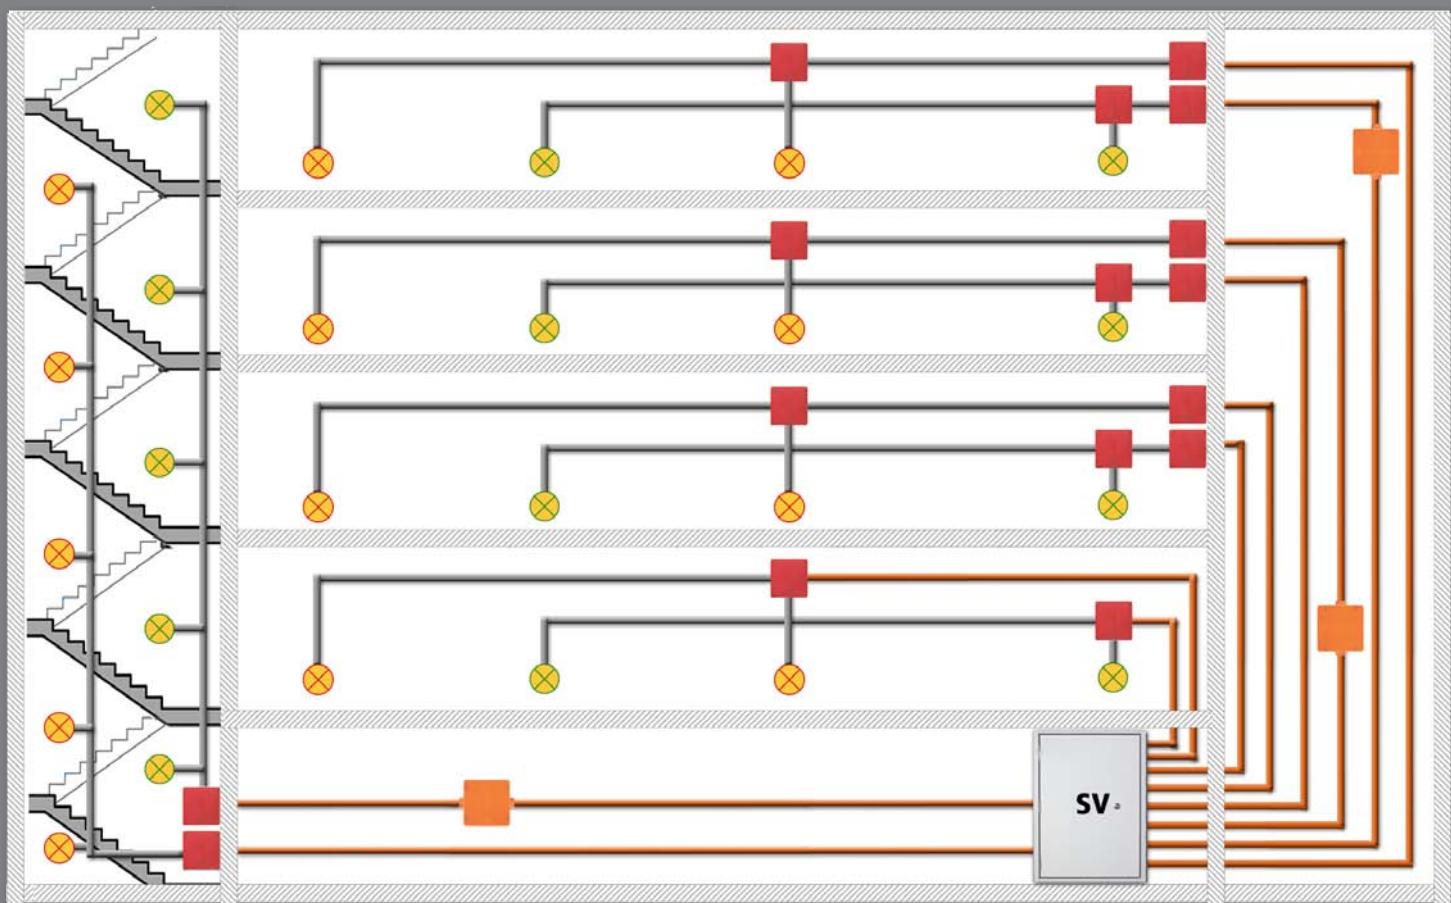

Ensuring the functional integrity for at least **90 minutes**, e.g., for:

- Pressure boosting systems for supply of extinguishing water
- Smoke and heat extraction systems
- Fire brigade lifts for extinguishing and/or rescue

The classes **E30** to **E90** identify the minimum duration for the functional integrity of electrical systems.

Planning freedom saves time and cost for you

- Clear and variable positioning of the base carrier through simple rotation in steps of 45°
- Step-less positioning of the longitudinal axis

WKE 2-6 | ... be flexible!

NEW!

An easy, quick and safe installation

- Central fixing through just one screw
- Accessible at any time
- All cable entries can be used with terminal in high position

Position above:

- easy handling of the wires
- Possible to mount the cables by adhering to the bending radius
- All cable entries can be used without restrictions

Position below:

- ideal for special solutions
- Use of D0 fuses (for WKE 6)

Extremely robust

- High protection class IP 66
- Impact strength IK08
- Ideal for special solutions e.g., in tunnels
- External fixing lugs and cover screws
optionally in stainless steel V4A
- High strength of the box

WKE 2-6 | Extremely robust for your safety.

The new WKE 4 to 6 branch and junction boxes with fuses offer functional integrity for the main supply line by enabling safe and secure branches for every floor or every fire compartment. In case of faults, only the affected branch is disconnected safely from the main line. The main line remains intact so that, for instance, the lighting of the escape routes continues to function.

This method enables a completely new type of installation, because there is no need to

supply power to individual sections in star-shape, but instead can junction off comfortably from the main strand without impairing the functional integrity. The cables saved in this way reduce cost and installation time while setting up the system. Double clamps made of high temperature ceramic material for cable cross-sections up to 16 mm² provide for additional safety and ensure the functional integrity up to E 90.

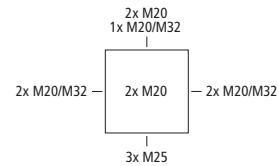

Similarly, the junction and connection boxes WKE 200-400 with fuses are also the new members in the WKE product family. They also help in disconnecting individual sections or floors from the main strand - but enable the wiring of cross-sections up to 35 mm.

WKE 200-400 | FOR SECURED JUNCTION

- Patented deflection diaphragms permit simple installation.
- Patented terminal holder system, can be positioned in steps of 90°
- Available in 4 variants, also without fuse
- The lid screws are made of stainless steel 1.4578 (V4A)
- External fixing lugs (ideal for quick assembly) are made of high corrosion-resistant stainless steel 1.4571 (V4A).

- Fuse in the junction up to 3 x D01
- Central fixing using one screw accessible at all times

- Use of all cable entries with raised terminal possible
- Pressure/Suction tight according to Gotthard guideline.

Lifted position:
easy handling of the wires

Bottom position:
ideal for special solutions

WKE 405 LSA | FOR COMMUNICATION LINES

Bild: Michael F. Mehnert (CC-BY-SA 3.0)

The underground line 55 of Berlin runs on the section between Brandenburg Gate and the main station. 365 days in a year, round the clock. The transport companies of Berlin (BVG) have very strict safety conditions for electrical engineering in the tunnels. They must ensure the functionality of the facilities vital for life even in case of fire.

The fire protection boxes of Spelsberg with integrated fuses protect the electrical cable systems in this harsh environment. In case of fire, they ensure that the lighting and the evacuation facilities continue to function for at least 30 minutes.

The special solutions of the types WKE 300 and WKE 400 in protection class II and

protection type IP66, developed especially for the Berlin transport companies, are made of a extremely durable halogen-free, self-extinguishing duroplast. A safe solution, wherever fire protection, high impact resistance and reliable sealing against dust and water are important.

Rapid-Box^{HT}

- Switchgear combination according to EN 61439
- Contacting of uncut conductors up to 50 mm² - also possible afterwards
- Connecting of cut conductors up to 35 mm²
- Maintenance-free mantle terminal
- Junction per pole up to 2.5 mm²
- External fixing lugs allow assembly even when the lid is closed
- Flexible adaptation to different installation situations thanks to the **turnable mounting plate**
- Robust and UV resistant enclosure materials protect the interior installation
- Safe installation due to the high ratings **IP66/67** and **IK09**
- Specific customer solutions are possible thanks to the modular system.

Rapid-Box^{HT} | WITH ELECTRICAL FUNCTIONAL INTEGRITY

Application examples:

The High Temperature Element (HTE) from Spelsberg is the only known temperature shutoff element on the market that can be used up to a limit temperature of **1000 °C**. Also well suited for technical fire protection applications. To prevent a short-circuit in event of a fire, the HTE is installed at the start point of the electric junction.

The HTE acts exclusively as temperature shutoff element. It disconnects the electric connection of the junction irreversible in case of a fire. Thanks to the shutoff element, an error in the junction does not impair the main line.

The junction is therefore separated safely and permanently, also in case of a fire. The continuous operating temperature of 80°C allows it to be used in conventional electrotechnical installations and switchgear combinations.

Description	Cable junction box
Manufacturer article number	86651201
Manufacturer URL	http://www.spelsberg.com/o/86651201

EMCS 4.0

Revit 2017

Spelsberg is a leading manufacturer in the electrical industry, especially serving in the electrical installation and enclosure technology sectors.

The family-owned company designs, produces and sells products and systems for the electrical trade and industrial sector and is known ... [Read more](#)

Digitalisation in building technology has long since arrived with the use of CAD and smart solutions. In case of **Building Information Modelling** the entire building is recorded as a model. In doing so, all data relevant for planning, execution or management are combined under a single interface across all sectors.

Consequently, all information is constantly available to all persons involved. If the architect changes the floor plan, the bill of materials for doors or sockets changes automatically, and plans for the supply lines are also adjusted.

From specialist planners to retailers right till the contractors, regular synchronisation always keeps everyone up to date. In this way, quality of the process increases, while time and cost are reduced.

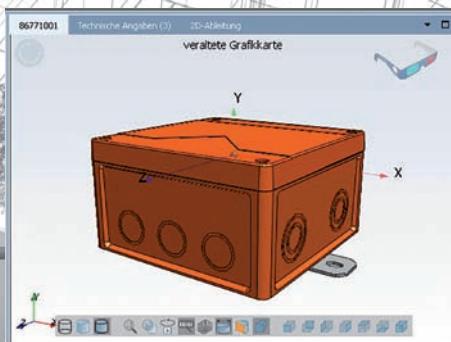

These can be downloaded from www.mepcontent.com.

MEPcontent
The BIM library for MEP engineers

Spelsberg supports the new standard

Many CAD manufacturers already support the IFC standard, which is available as an open standard to anyone who deals with buildings throughout their lifecycle.

With immediate effect, Spelsberg is also offering its products as BIM objects for the software solutions REVIT and ArchiCAD.

Cadenas PARTsolutions supports design engineers, planners and buyers in their work by providing CAD models. For this reason, Spelsberg is also present with its products on the 3D CAD download portal **Cadenas PARTcommunity**.

As early as in the design phase, engineers quickly find both components and standard parts using the smart portal search function. Apart from this, PARTsolutions also offers the possibility of reducing and managing the components product costs significantly.

Likewise, the increased clarity in the form of a unified structure in the parts-information data and the ordered catalogue structure is a valued advantage for the users.

PLANNING HELP - Efficient planning and construction
Spelsberg offers ready-to-use advertising texts for all products on **ausschreiben.de**, **ais-online.de** and **heinze.de**. The texts provide relevant product information and descriptions in a convenient format. Thus, planners and architects have this tool directly available for efficient and safe planning.

The Spelsberg product series are additionally characterised by expert opinions. The official documents of the certified WKE products can be downloaded as PDF from www.spelsberg.com.

For connecting and junction

Product-number	Description	Max. conductor cross section /mm ²		Number of poles		Different conductor cross sections per pole possible with DUO terminals
		Cable connecting	Cable junction	Connection	Junction	
866 502 01	WKE 2 - 5 x 1,5 ²	2,5	1,5	5	5	no
867 400 01	WKE 2 - Duo 3 x 4 ²	4	4	3	3	yes
